

# GTC APP – NVIDIA – Schedule Page

■ My notes/comments

**Schedule (List and Calendar View)**

View Details

Enroll/Un-enroll

View recording/live video(if available)

Session Feedback (go to external website) [polling]

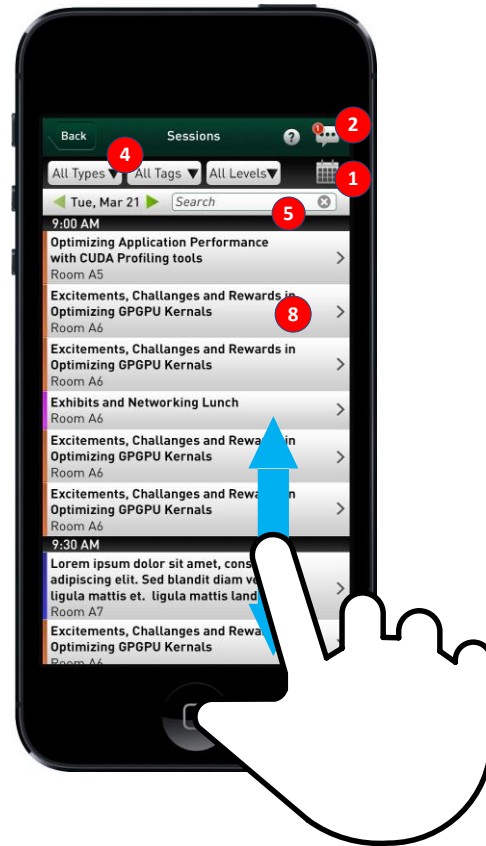

Notes

Assets – View/Download PDF, View/Download Session recording, view PDF event poster

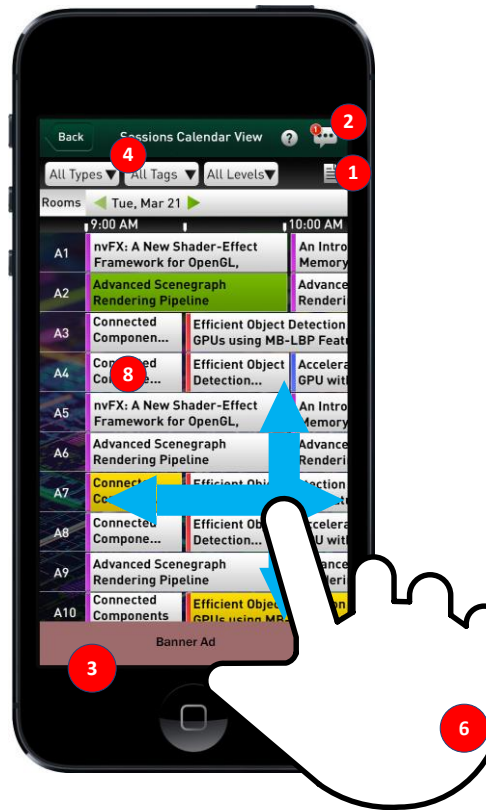

View speaker details

Add/remove from wishlist

Sessions – List View

Sessions – Calendar View

1 Click this icon to toggle between calendar and list view

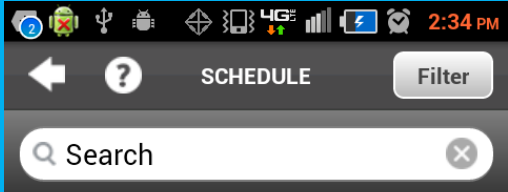

2 This icon is the notifications icon, it would open a pop up similar to facebook. There is a separate issue for this feature.

3 Banner ad will likely be on all or most screens throughout app, it would not scroll.

4 3 filters here:  
Filter by:  
Type  
Tags  
Levels  
List will be provided from NVIDIA. Filters would be drop down lists which would open with native device control

Users can search List View but CANNOT search on Calendar View

5 Search field should stretch to the entire width of the screen on focus (as the current demo app does now – shown here)

6 On Calendar View users can scroll left, right, up, down. The Room names on the y axis are fixed and do not scroll (except if a user scrolls down it reveals more rooms)

Grey subheader and filter bar do not scroll

7 Note that the header names are different based on which part of the UI the user is in. (Sessions, Vs. Sessions Calendar View)

8 If a user touches any row they go to the session details screen (separate issue)
